This seminar will involve a screening of *Lost in the Woods*, a narrative film about access to mental health services by rural youth with mental health problems. There will be a keynote address by **Irving Gold** followed by a brief panel discussion about the use of narrative film within qualitative research.

Mr. Gold joined the CHSRF in 2001 and has worked in the area of knowledge transfer and exchange for a number of years. In the last three years he helped create both intellectual and practical supports in Canada for knowledge exchange specialists in the health sector. He also led the development of our knowledge brokering program and launched the knowledge brokering demonstration sites competition. Before joining the foundation,

Dr. Kate Tilleczek has been engaged in research on the developmental health and education of children and youth. Her research has applications for both health and education, and their inter-relationships. Kate teaches qualitative research methods and the sociology of childhood and youth. Kate's other research focus is the evaluation of the delivery of health education to rural and remote communities.

Dr. Hoi F. Cheu has been researching interrelations between storytelling and mental health in the framework of complex systems theory. He is presently shooting a documentary film about the founding of the Northern Ontario School of Medicine.
